05 Outlook

Resilient Growth Outlook for Data Centre Industry

Global Market Uncertainty

- **Global macroeconomic conditions remain uncertain** amid ongoing geopolitical tensions in the Middle East and persistent inflationary pressures¹
- **The Fed held policy rates steady but signalled a higher-for-longer rate environment²**, which may increase financing costs and weigh on investment spreads

Sustained Demand for Data Centres³

- **Global demand for data centre capacity is expected to grow** at a compound annual growth rate (CAGR) of 25% to reach 256GW by 2030
- By 2030, **Asia Pacific to account for ~34% of global demand** with **artificial intelligence workloads projected to grow to 50% of data centre demand** from 30%

Accelerating Convergence of Digital and Energy Infrastructure⁴

- **Power availability is the primary determinant** of development feasibility
- Operators are **pairing data centre capacity with dedicated energy supply**, storage and long-term power procurement
- This marks a shift towards treating **data centres as strategic infrastructure, closely aligned with energy planning**, generation and grid management
