1H 2023 Key Highlights

Stable financial performance underpinned by quality portfolio

- Stable distributable income and DPU mainly due to contributions from acquisitions and proactive asset management
- Majority of rental income is derived from clients with investment grade or equivalent credit profiles

Proactive management of impact of borrowing costs and currency fluctuations

- No refinancing requirements for the rest of 2023, bulk of debt expiring from 2026 and beyond
- Healthy aggregate leverage of 36.3%
- Interest rates exposures are mitigated with 73% of loans fixed
- As at Jul 2023, our forecast foreign sourced distributions have been substantially hedged till end Jun 2024

Continued pursuit of growth opportunities

- Disciplined pursuit of data centre acquisition opportunities
- Maintain geographical diversification for growth and income resilience

Stable Distributable Income and DPU

Distributable Income (\$'000)¹

Distribution Per Unit (cents)²

1H 2023 vs 1H 2022

- Stable distributable income was mainly due to:
 - Acquisitions of Guangdong Data Centre 2 & building shell of Guangdong Data Centre 3
 - Renewals and income escalations
 - Tax savings³ from approvals obtained for the NetCo Bonds to be qualified as Qualifying Project Debt Securities

These were partially offset by :

- Higher finance costs from the refinanced loans, as well as floating interest rates loans
 - Net lower contributions from some of the Singapore colocation assets arising from higher facilities expenses including electricity costs
 - Lower government incentive sum for our investments in Guangdong
 - Less favourable forex hedges
- Higher finance income mainly due to coupon income from Guangdong Data Centre 3

Demand Underpinned by Strong Market Fundamentals

- Data centre demand continues to be driven by hyperscale expansion, growth in both consumer and enterprise activities and adoption of new technologies^{1,2,3}

- Structure Research forecasts a 12% growth year-on-year in the global data centre colocation and interconnection market to US\$72.7b in 2023, supported by global expansion, hyperscale consumption, uptake in interconnection and development of edge location⁴

- Growth of generative AI applications such as ChatGPT and Bard will accelerate demand for data centres, and help push for facilities with higher power density⁵

- Higher cost of capital and labour, power shortages, and supply chain demands continue to weigh on data centre development^{2,5}

Capital Management

Favourable Debt Profile

- Completed refinancing of all loans due in 2023 in Apr 2023, bulk of debt expiring from 2026 and beyond
- Healthy aggregate leverage provides debt headroom for growth opportunities

- As at Jul 2023, our forecast foreign sourced distributions have been substantially hedged till end Jun 2024
- Adopted natural hedging by borrowing in currencies that match the corresponding investments
